(By Prof. Seitz, M. A.)--A point is taken at random in the surface of a given circle, and from it a line equal in length to the radius is drawn, so as to lie wholly in the surface of the circle; find the chance that the line intersects a given diameter. Solution by Rev. H. J. Day, M. A. ; E. B. Elliott, M. A. ; and others. Let p be the distance of the random point P from the centre of the circle C; c the radius of the circle; and p the inclination of CP to the given diameter. Then the whole range of the angles at which the radius can be drawn as prescribed through p, is 2cos-1--, and the number that cut the dia2c meter in that set is, evidently, This expression does not seem to admit of integration in finite terms. 5758. (By Rev. H. Q. Day, M. A.)--If A, B be two fixed points, and P a variable point in the line AB, and if with A, P as foci an ellipse of eccentricity i be drawn, and with B, P as foci an ellipse of eccentricity c2, intersecting the former in Q; prove that the locus of Q is an ellipse...
