Very helpful to any or all category of folks. It is written in simple phrases rather than difficult to understand. It has been developed in an exceptionally simple way and is particularly just after I finished reading this pdf in which basically transformed me, modify the way in my opinion.

In their north and south range the scattered and disconnected occurrences extend from Mexico to Alaska and the Arctic Ocean, although they do not territorially cover a large region. Represented upon a map with other formations, they might hardly be noticed except by one looking for them. They are but remnants, or even mere traces, of what was once a more extensive system of deposits, which in some places have been entirely removed, and in others covered by later sediments, and in some cases by volcanic flows. One of the largest and most noteworthy of these remnants occupies the Sacramento Valley in central-northern California, where it occurs in unconnected dashes along its borders, in low hills flanking the valley upon the east and west. Southward in California, the Cretaceous rocks are sparingly distributed, occurring only at intervals in the Coast Ranges, where they either form some of the lesser ridges or protrude from beneath ridges of later sediments. In the extreme southern portion of the State, and in Lower California, they are confined to a narrow belt in the immediate neighborhood of the coast, buttressed against the older crystalline rocks of the interior. Northward in California, and in Southern Oregon, the Cretaceous beds are restricted to the larger valleys lying among the Klamath Mountains or upon their eastern outskirts; and here, also, they rest upon the older crystalline...
