

Airscrews in Theory and Experiment (Paperback)

Filesize: 3.9 MB

Reviews

*Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It has been written in a remarkably easy way in fact it is only right after I finished reading this book in which basically changed me, modify the way I really believe.
(Prof. Vanessa Smitham V)*

AIRSCREWS IN THEORY AND EXPERIMENT (PAPERBACK)

To download **Airscrews in Theory and Experiment (Paperback)** PDF, remember to click the hyperlink listed below and save the document or have accessibility to other information which might be relevant to AIRSCREWS IN THEORY AND EXPERIMENT (PAPERBACK) ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 Excerpt: .Curves of Airscrew for BE.2e. Value of (V/nD) Fig. 43. Interference of body and wings are 75.5 per cent, 74.0 per cent, and 76.0 per cent respectively. At climbing speeds, the efficiency of the aircrew with the interference of the body alone is about 2 per cent lower than that of the aircrew without any interference. The efficiency at the lower values of (V/nD) is practically unaffected by the combined interference of the body and wings. We found that at a wind speed of 40 ft. per sec. the resistance of the model body alone (see Fig. 42) was 0.34 lb. At the same wind speed, the resistance of the model body with the interference of wings and struts--the wings and struts were supported in place and not attached to the body--was 0.365 lb. Hence at a wind speed of 100 ft. per sec. the resistances of a similar full-scale body alone, and also of a similar full-scale body with interference of wings and struts, would be 76.5 lb. and 82 lb. respectively. As in the previous experiments, (R/R_0) was a linear function of (T/pV^2D^2) . With no interference from the wings we found that $(R/R_0) = 0.855 + 1.32(T/pV^2D^2)$, where (T/pV^2D^2) is the absolute thrust coefficient of the aircrew working with the interference of the body alone. With the interference from both wings and body, $(R/R_0) = 0.83 + 1.18(T/pV^2D^2)$. In the latter case (T/pV^2D^2) is the absolute thrust coefficient of the aircrew working with the interference of both body...
