

## Symptoms of Visceral Disease A Study of the Vegetative Nervous System in Its Relationship to Clinical Medicine

By Francis Marion Pottenger

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 110 pages. Dimensions: 9.4in. x 7.2in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 edition. Excerpt: . . . action by the visceromotor reflex as detailed above; but particularly those receiving innervation from the IIIrd and IVth segments, thus: sternucleidomastoideus, scalenus anticus and medius, trapezius and rhomboidei. The muscles affected are shown in Fig. 35, page 163. Thus the viscerotrophic is much wider in the extent of tissue involved than either the visceromotor or viscerosensory reflexes. There is a condition present in most people which proves to be very confusing in determining the trophic reflex changes which arise from the lung in the soft tissues immediately below the clavicle on the side of the arm that is used more. As previously mentioned, the shoulder on the side which is used more, is lower than the other because of a lengthening of the muscles which support it. As the acromion drops, the end of the pectoralis which is attached to...
